

Lead Investment Engineer

Company Overview

Sharpe is a Bay Area-based technology company building a tech-enabled multi-family office for ultra-high-net-worth clients. The company is developing a sophisticated wealth data model that captures assets, entities, contracts, and relationships, enabling advanced tax planning, simulations, and investment optimization. Its long-term vision is to create the most technology-driven platform for maximizing after-tax wealth outcomes.

The Opportunity

Sharpe is seeking an Investment-Focused Engineer to help build the firm's investment platform, optimization systems, and core infrastructure. This individual will operate in a highly entrepreneurial environment, working across data engineering, quantitative infrastructure, backtesting, optimization, and investment systems.

Key Responsibilities

- Build and scale investment and trading infrastructure.
- Develop optimization systems to identify tax-efficient investment strategies.
- Design and maintain core wealth and investment data models.
- Build data ingestion, security master, and simulation capabilities.
- Contribute to strategy design, testing, and implementation.
- Work across infrastructure, cloud, data, and quantitative research functions.
- Partner with leadership to shape the future investment platform.

Required Experience

- 3–10 years of experience in quantitative finance, investment technology, or related fields.
- Strong systems-thinking mindset and ability to solve complex optimization problems.
- Experience building scalable infrastructure, data platforms, or quantitative systems.
- Exposure to derivatives, fixed income, equities, or other sophisticated financial products.
- Hands-on experience with data engineering, simulations, and backtesting frameworks.
- Comfortable operating in a startup environment and wearing multiple hats.

Ideal Background

- Quantitative hedge funds, systematic investment firms, fintech companies, or related industries.
- Experience with multivariate search, optimization, or large-scale decision systems.
- Interest in tax-aware investing and portfolio construction.
- Strong engineering fundamentals with a bias toward ownership and execution.

First Six Months Priorities

- Establish the foundation for investment-related systems and workflows.
- Build the initial optimization framework for tax-aware investing.
- Contribute to core infrastructure and data models required to support client portfolios and trading activities.
